Category:London Grammar albums1. Field of the Invention The present invention relates to a phase-change memory device and a method for manufacturing the same, and more particularly to a phase-change memory device and a method for manufacturing the same, capable of storing multi-bit data in one memory cell without using any hard masks. 2. Description of the Prior Art As technology progresses, the system for storing data is getting smaller, and the data-transfer speed and data-storage density are increasing simultaneously. Accordingly, how to reduce the size of the system for storing data is one of the important issues to the development of the industry. The conventional memory device has a similar characteristic with that of the logic device. A typical semiconductor memory device includes a plurality of memory cells, a plurality of access circuits and a 2d92ce491b
