You will need to: download it, extract it, add the necessary folders, and then run the game.CASE REPORT ===== A 47-year-old woman presented to our clinic with a 6-year history of a painless, slowly enlarging, cystic, and nontender mass on the tip of her nose. Her medical history was unremarkable. There was no history of trauma, nose blowing, or nose blowing and sneezing. The nasal mass had increased in size from 1.0×1.0 cm to 1.5×1.5 cm. There was no nasal discharge, numbness or difficulty in eating. Intranasal endoscopy revealed a 1.5×1.5×1.0 cm hard, well-circumscribed, cystic mass located on the tip of the nasal septum (Figs. [1](#F1){ref-type="fig"} and [2](#F2){ref-type="fig"}). On computed tomography of the paranasal sinuses, a cystic mass with a smoothly marginated border, measuring 1.6 cm in diameter and a possible central fluid attenuation

was found near the anterior wall of the maxillary sinus (Fig. [3](#F3){ref-type="fig"}). Magnetic resonance imaging showed a well-circumscribed mass, measuring 1.4 cm in diameter, located on the tip of the nasal septum. The mass contained a fluid-fluid level with a density of the intranasal septum higher than that of the nasal cavity (Fig. [4](#F4){ref-type="fig"}). The differential diagnosis included a dermoid, dermoid-like cyst, vascular epidermoid, mucocele, fibrous histiocytoma, and intranasal dermoid.
