I just recently installed a patched version of BZ on my Win7 machine. Every time I try to start a mission the game just crashes. I assumed it was. I followed the steps. I downloaded all the files from the bin/bz-release directory and installed them. I made an update. I installed the bug fix and checked if BZ-REEL is installed. I checked all the log files and found entries about it that I think it was installed and can't find any BZ-REEL. I also uninstalled every other game I have and couldn't find any other points of failure. I couldn't find any other points of failure. In the end, I just tried running BZ-REEL again. fffad4f19a
