Share this blog [Subscribe by email](#) About Brad and Joanne Brad and Joanne Lozzi have been married for over twenty years, have three children (a girl and two boys), and live in Silicon Valley, California. They have been fascinated with computers since the 1980s, and have kept up with the technology in between kids, jobs, and travel.

---

Brad has been working in the IT industry for over twenty years, while Joanne is retired from the educational technology industry. Brad has been an avid writer for over a decade, and the family regularly goes on day trips and road trips to visit old stomping grounds and explore new places. Get the latest in news, tech and health on the go with our mobile apps — available on the Apple App Store, Google Play, and Amazon Appstore. The critical patch frequency method for the

---

estimation of time to persistence of psychotropic medicines in soil.

Aims: For many of the new psychotropic medicines (NPMs), clinical studies have shown that their elimination half-life ( $t(1/2)$ ) in human fluids is relatively long ( $\sim 14-21$  days). This property implies that, for these medicines, a relatively long time is required before their concentration becomes undetectable in the body ( $t(1/2)$ ) and, consequently, after which no toxic effects can be observed. The goal of this work is to use the

---

critical patch frequency (CPF)  
method for the estimation of  $t(1/2)$   
for several NPMs in soil. Methods:  
To this aim, we simulated human  
and soil conditions and compared  
the persistence of NPMs and  
model drug molecules by using the  
data collected from literature. We  
also estimated the  $t(1/2)$  for several  
active pharmaceutical ingredients  
(APIs) with different  
physicochemical characteristics.  
Results: The
