Can any one suggest me how can i do this. Is it possible? A: You have to go through the windows message database and see if there is a relevant function. Since you say that you are seeing the menu on the mouse up event, then you may have to programmatically simulate the right mouse button if the left mouse button doesn't generate a WM_LBUTTONDOWN. As an example, the following function will simulate the right mouse button on a window, and change the menu the same way it would if the right mouse button were clicked. [DllImport("user32.dll")] public static extern IntPtr SetWindowLong(IntPtr hWnd, int nIndex, IntPtr dwNewLong); public static void TriggerMessage(IntPtr hwnd) { var hwndTip = new System.Runtime.InteropServices.HandleRef(hwnd); var lParam = new IntPtr(2); var wParam = new IntPtr(0); var mod = new Marshal.GetLastWin32Error(); IntPtr proc = FindWindow(null, "Untitled - Notepad"); IntPtr result = SetWindowLong(proc, 3, hwndTip.Handle); if (result == IntPtr.Zero) return; SendMessage(hwndTip.Handle, 0x20D, wParam, lParam); SendMessage(hwndTip.Handle, 0x205, wParam, lParam); if 2d92ce491b
