P0 interacts with a family of complex glycoproteins, the MAGUKs, which regulate the clustering of signaling molecules and their effectors to specific domains of the plasma membrane. The hypothesis is that MAGUKs provide the structural basis for clustering and regulation of P0 in myelin, and that this regulation is essential for myelin assembly and maintenance. The MAGUKs provide diverse binding activities that recruit P0 to specific components of the plasma membrane and to intracellular membranes, and mediate the intracellular trafficking of P0 to the plasma membrane. The molecular mechanism of this trafficking is not known, but it is important for the assembly and maintenance of myelin. The objectives are: 1) to determine the molecular basis for the assembly of P0 into myelin by testing the hypothesis that MAGUKs mediate the formation of P0 dimers and oligomers and assembly of P0 into myelin; 2) to determine the molecular basis for the maintenance of P0 in myelin by testing the hypothesis that MAGUKs provide the structural basis for the intracellular trafficking of P0 to the plasma membrane; and 3) to test the hypothesis that MAGUKs are involved in the pathogenesis of hypomyelination. The Specific Aims are: 1) to determine the mechanism of P0 dimer and oligomer assembly and myelin formation. Coexpression of P0 and MAGUKs will be examined in a series of experiments to test the hypothesis that MAGUKs are essential for the formation of P0 dimers and oligomers; 2) to determine the intracellular trafficking of P0 in myelin. The intracellular

He was later succeeded by his brother, who became Emperor Kanmu. Events of his life Sigeku's mother was Empress Kōken. She was the only daughter of Fujiwara no Nakahira and the youngest of the three daughters of Emperor Murakami. She was raised by Fujiwara no Sanetoki. Sigeku had no sons, but he did have a daughter named. Sigeku had his first son, the first to be named Prince; a daughter named ; and a son named. Sigeku had another daughter named and another son named. His children's order of birth was: Prince Second son Prince Princess Prince Prince Princess Princess Prince Prince Prince Prince Prince Prince Prince Prince Prince Princess Princess Princess
