February 11, 2020 During early development Google committed to starting Android 9.0 Pie in Android Q in May 2019 and as we have come out of the summer release of Android Q Beta, Pie, the time has come for Android Q Mobile release. This is a big release for Samsung Android users, meaning the next version of Samsung Galaxy devices are out the door. According to Samsung, the new Android Q will include a new user interface, new features and a new design. These features will be made available at the beginning of the 2019. One of the main features of Android Q is the ability for users to control screen brightness. This is a feature that is already available on Samsung phones with 'Adaptive Brightness', but users will be able to control the brightness of their phones in a more direct way. There is also changes to the notification drawer, the new user interface is simpler, more responsive and has added control over the notification privacy. Some of these features are new and others have been present for some time now, but with Android Q there are many new features and some new enhancements to popular features we already know and love. The update is expected to be announced by the end of this month and will be rolled out to Android devices in phases at different times. More information on Android Q can be found here.
