Resolve For BagleDl-AB

What's New In?

Infects MS Word, Excel, PowerPoint and other Office 2010-based applications. BagleDl-AB is a Trojan that spreads to other computers on a network by using the Microsoft Office document viewer. BagleDl-AB sends itself to other computers that the user of the infected computer has opened a document with. The next time the user opens a document, BagleDl-AB appears in the file selection dialog box. After selecting a document, BagleDl-AB opens a document and uses it to infect the computer. The Office 2010 document viewer opens documents from the following programs: Microsoft PowerPoint Microsoft Word Microsoft Excel Microsoft OneNote Microsoft Access Microsoft Project Microsoft Publisher

Microsoft Visio Microsoft Photo Editor To make the infection even easier, BagleDl-AB provides a silent installation capability. All the configuration files used by the Trojan are embedded into the installation package. BagleDl-AB installs itself silently into the system without the user's permission. How does BagleDl-AB work? BagleDl-AB uses a number of processes to alter the system. To start off, BagleDl-AB attempts to prevent the user from executing programs by creating a user profile with certain settings that cause the computer to freeze or crash. BagleDl-AB then calls Cscript to create a hidden registry key that prevents Office 2010 and other programs that might have been opened by the user from running. The BagleDl-AB installer also creates the following registry key: HKCUSoftwareMicrosoftWindowsCurrentVersionRun auto__hloader__key hloader_exe.exe HKCUSoftwareMicrosoftWindowsCurrentVersionRun auto__hloader__key

hloader_exe.exe This hidden registry key starts hloader_exe.exe on startup. The hloader_exe.exe uses the following functions: Cleans up the PEB+structures on the Win32 heap by calling ldwpeb->u.dwFree. Removes values from the IE user data memory structure and the IE cache by calling ldweem->u.dwieemData. Changes the registry value (HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon) to a name of the infected computer or network computer. If the value does not exist, hloader_exe.exe tries to create it. If the value does exist, hloader_exe.exe modifies it to have the following value: name="www.hleader.biz", value=0 If the value does not exist, hloader_exe.exe tries to create it. Modifies the registry value (HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\

System Requirements:

Minimum: OS: Windows Vista or later Processor: Intel Pentium 4 / AMD Athlon 64 / Core 2 Duo / Core 2 Extreme Memory: 1 GB RAM Graphics: DirectX9 or better-capable graphics card with at least 128 MB of VRAM DirectX: Version 9.0c Hard drive: 5 GB free hard drive space Video: 1280 x 800 HD or higher (or 720 x 480 HD) Sound: Windows compatible speakers Additional Notes: VR mode is recommended for best
