Ideal for any music enthusiast, the frequencies of stringed instruments can be calculated with this tool. Additionally, with the acoustic resonance tab, it will be possible to calculate and see the shape of the box in question. It is important to be able to calculate the acoustic resonance of stringed instruments, as this will allow you to adapt the strings, the strings too strong, or too weak for your particular instrument. Besides, it will allow you to choose the resonant mode you want to use when playing or tuning the instrument, and see if it makes sense to increase the resonance of a low-frequency or high-frequency string. You can calculate the acoustic resonance of: a violin, a flute, a bass, a guitar, a trumpet, a piano, a vibraphone, a drum, a harmonica, a violin, a viola, a cello, a clarinet, a snare drum and any other stringed musical instrument. What's new: * New "Acoustic Resonance" tab - It is important to be able to calculate the acoustic resonance of stringed instruments, as this will allow you to adapt the strings, the strings too strong, or too weak for your particular instrument. Besides, it will allow you to choose the resonant mode you want to use when playing or tuning the instrument, and see if it makes sense to increase the resonance of a low-frequency or high-frequency string. In this tab, you will find the main resonant frequency, the height, the length of the tube and the specific shape and volume of the box or sphere. Calculation of the acoustic resonance is provided for flute, clarinet, violin, guitar, piano, vibraphone, bass, drums, trumpet, harmonica, violin and cello * New "Frequency of Sound" tab - This tab provides data about the main frequency of the resonance of each musical instrument. * New "Amount of Resonance" slider - This

What's New In?

ResonanceBox Frequency Calculator is a tool designed to help you calculate the acoustic resonance of various musical instruments based on the input values. The utility is suitable for a wide range of instruments, from guitar, violin and bass to drums, flute and clarinet. Functionality-wise the application is straightforward and suitable for users of all levels. You can learn the acoustic resonance of the instrument you are playing by specifying particular details, such as the diameter, height and length for the tube, rectangular box, hollow open, hollow sphere or the Quantum Casimir effect, for example. It is worth mentioning that the program can calculate the first five wavelengths and frequencies for the instruments and you can customize the speed of sound that you are using or expecting from it. ResonanceBox Frequency Calculator was designed for two purposes: * To help musicians and instrument designers to calculate the acoustic resonance of the instrument based on the inputs. * To give instruments users a reliable reference on the acoustic resonance of the instruments they are playing.
