The Zaxboard ZX10 is a new technology that can be combined in one device. A new generation of gyroboards has appeared on the market of electric transportation. They have ... Read more Zaxboard ZX10 is a new system for city and off-road riding on a gyroboard. This gadget will not let you get bored in the city and give you the opportunity to feel like a real racer. This device differs from a gyroboard in that it does not have the usual wheels, instead of wheels, it has four mini-motors that allow the gyroboard to accelerate to 20 km / h and overcome up to 20 km on one charge. This device will not let you get bored in the city and give you the opportunity to feel like a real racer. It has three modes of operation: "Normal" - the standard mode for driving on smooth pavement. "Sport" - allows you to increase speed and power, but at the same time reduce control over the car. "Snow" is a mode for snow, allowing you to maximize the vehicle's potential. By using the two types of driving modes, the car is fully in control on a slippery road. All wheels have the same locking system, resulting in maximum traction with the road surface. Independent braking systems are fitted on all four wheels to provide reliable braking, depending on road conditions. The ESP electronic stability system and the ASR traction control system ensure optimum traction and safety at high speed. Thanks to the use of a six-speed automatic transmission, the car is capable of reaching speeds of up to 250 km/h. How is it possible? How is it possible with such power? And all this is thanks to innovative technology Mazda, which made this model truly revolutionary. To date, the CX-9 model is one of the highest in its class. The car has been designed using the most modern technologies. It has an excellent smooth ride, excellent overtaking and maneuvering capabilities, and is able to provide an unsurpassed driving experience. This car has excellent dynamic potential while maintaining comfort that passengers will appreciate. A wide range of solutions were used during the upgrade to improve comfort and provide excellent performance. With solutions such as voice recognition, cornering traction control and Active Lane Articulation technology, you can concentrate on driving and not driving.
