0.2 Software Author(s): S. Coeffey Date: N/A. 18-4-19. The first edition of this book was published in 1991. Although...Field of the Invention The present invention relates to an information processing apparatus for deleting file data and a method of controlling the same. Description of the Related Art As an information processing apparatus, there is an image forming apparatus such as a multifunction peripheral including a printer function and a facsimile function. In an information processing apparatus, after being deleted, file data is moved in a memory that is external to a memory that stores image data, which is read out by an image reading section, in a specific folder. The image data stored in the memory is deleted in accordance with a determination of the apparatus. In an information processing apparatus, when a printing instruction from a host computer is received, an image is read out from a memory via a control section, and image data is output to a printer via a recording section. As described above, the image is read out from the memory and output to the printer, and thereafter, the image is deleted from the memory. When the image is read out from the memory, data of a certain capacity is deleted from the memory. The image data is deleted to cope with a situation in which the image data is excessively read out from the memory. In the above-described case, a file deletion condition with respect to a folder for which file deletion processing is performed is not clear and the destination for which the file is deleted is not determined in advance. That is, it is necessary to make a determination of the destination for which the file is deleted from the file that is read out from the memory and output to the printer. When the image data of a certain capacity is stored in the memory, it is necessary to make a determination as to which capacity of the image data corresponds to the amount of data to be deleted. When deleting a file, a determination is made with respect to whether or not the file exists on a host computer. However, file data deleted from a memory is stored in a memory external to the memory, and hence the deleted file data is difficult to be handled by the host computer. Thus, it is necessary to determine a folder to which the deleted file data is to be saved from among the folder defined on the host computer. Japanese Patent Laid-Open No. 2010-230457 describes a method of determining file data to be deleted from an image read out

WASHINGTON (MarketWatch) -- Billionaire activist investor Carl Icahn said on Wednesday that he agreed with a CNBC report, which said that he plans to call on Schwarzman to dissolve R.E.P. Holdings, the company that owns R.E.P. Credit Suisse Group AG CSGN.S. Icahn called R.E.P.'s chief executive, Stephen Schwarzman, a "monster" and said it was not clear whether the firm could meet its obligations to holders of its bonds and preferred shares, as shareholders demand. Icahn's call on R.E.P. was based on an off-the-record call with CNBC on Tuesday. Icahn declined to comment on Wednesday. Icahn does not typically disclose which companies he likes or dislikes. R.E.P. said earlier this year that it had received a call from legal advisers suggesting it offer shareholders more cash than the firm was prepared to put up. R.E.P.'s noteholders received an 8.3% dividend in April but have yet to receive any cash to date. Icahn suggested on Tuesday that R.E.P. was being unfairly targeted because of a prior arrangement with Goldman Sachs Group Inc GS.N, Goldman's chief executive, which allowed the bank to sell assets to R.E.P. in exchange for debt at a lower rate. Icahn called R.E.P.'s issuance of the debt to Goldman "outrageous." "Everything is fair if you play by the rules," Icahn said in a CNBC interview. Icahn added he would not have taken a call from the television network if it had not been based on the existence of his comments and the information it 3e33713323
