In 1999, Eurocode 2 was adopted by the majority of the EU member states. CAD standardization was a key initiative of the IEEE PASC. The target of the effort was to write a single set of standards applicable to CAD, allowing interoperability between different CAD systems. In 2002, a feature of DWG files allowing the specification of an isometric view by using the spheroidal curvilinear coordinate system was added, making it possible to view drawings with a custom perspective. AutoCAD 2002 introduced the concept of process, which allows an independent process to be specified on multiple drawings. In 2004, the mathematical functions that were part of previous versions of AutoCAD became independent of the Geometry Center (MATHCAD). AutoCAD 2004 introduced a 5-sided polygon shape, a common type of polygon in many CAD systems. In 2005, CADx 2.0 (architecture only) was released and has been constantly updated until 2016. In 2006, AutoCAD 2010 introduced the combination of 2D and 3D functionality, allowing both 2D and 3D models to be used at the same time. In 2007, AutoCAD 2010 introduced a number of functions allowing the creation of industry standard DWG and DXF files. In 2008, AutoCAD 2012 introduced an integrated software architecture that allows running multiple AutoCAD applications on a single workstation. In 2009, a feature allowing the creation of chamfered corners in 2D drawings was added. In 2010, the first iteration of the DirectParameter command was released. In 2011, the 3D Circle was introduced. In 2011, the first iteration of the DirectParameter command was released. In 2011, a 3D split view was added. In 2011, AutoCAD 2012 introduced the ability to open PDF files, which is a PDF 1.4 file. In 2012, 2D DWG files were introduced. In 2012, the first iteration of the DirectParameter command was released. In 2012, the second iteration of the DirectParameter command was released. In 2012, CADx 3.0 (architecture only) was released. In 2012, AutoCAD 2012 introduced the ability to open PDF files, which is a PDF 1.4 file. In 2012, AutoCAD introduced standard data structure for objects in their database: "db objects", such as lines, arcs, a1d647c40b

In case of the apparent lack of attention to bitstream convergence of audio and video codecs, over-the-air (OTA) transmission of digital multimedia broadcasts (DMB) is becoming more and more important. The DMB service will be available for users, for example mobile subscribers, via their wireless mobile devices. The OTA transmission ensures that the digital video broadcasting system (DVB-T) and other systems can be used in connection with mobile services. The audio-visual (AV) services are transmitted in MPEG-2 Transport Stream (TS) transport streams by means of DVB-H. At present a DVB-H reception, for example at a mobile terminal, is difficult to test. The U.S. specification described in "Specification for Adaptive Multi-Rate (AMR) speech codecs", 3GPP TS 26.190 v1.0.0 (2007-04) 15, is an audio service of the WCDMA network. This specification defines the AMR speech codecs, which are used for voice or speech services in mobile telephone and computer networks. The AMR speech codecs can be implemented by the so-called multi-rate speech coder (MRC) for the rate adaptation of the time-frequency resource elements (resource elements, RE). A description of the codecs is also described in "ITU-T standardization of the GSM/AMR audio codecs", GSM 03.03 v4.0.0, ITU-T Q.23 v1.0.0 (2004-11) 15, pp. 1-18, the contents of which are hereby incorporated by reference.Q: String to json with special charcter in php i want to convert the string to json i write this \$temp = "[".json_encode(\$name)."];["json_encode(\$phone)."];["json_encode(\$email)."];"; \$arr = json_decode(preg_replace("/\]/", "", \$temp)); in my android device the json data is { "b_id":null, "b_name":"xxxx", "b_phone":"xxxx", "b_email":"xxxx" }
