## VideoPlayerConverter

Watching movies on the home PC is a very common pastime for many users as is converting videos from less common to popular formats so that they can be played onto a variety of devices. Combining these two activities is possible but it usually requires two different applications to be downloaded and installed separately. VideoPlayerConverter comes to alleviate this problem, as it includes both tools in the same package. Simple and well organized front-ends for playing and converting movies The installation of the two programs is done in the same time, so as soon as the setup is complete, you will have both of them ready to be deployed with a single click. The interfaces are quite similar and have all the commands and functions placed inside the toolbar that sits in the upper part of the main window, for quick access. Basic playback commands and detailed media information The Video Player app that is part of the package supports an impressive amount of video, audio, Flash and other types of files. The viewing options can be adjusted from the dedicated menu, so the video size can be set to half or double the original dimension. There is, of course, a full screen mode that can be activated with ease. There are many details concerning the loaded movie that can be viewed from the left side pane, including size on disk, format, frame size, video and audio codecs. Varied choice of customizable conversion profiles Thanks to the Video Converter component, you will be able to choose some files or add entire directories to the processing queue, then have them transformed in the desired format on the spot. There are loads of output profiles built-in this application and you have the possibility to set manually the video and audio options from the dedicated area. A complete solution for viewing and converting videos On the whole, VideoPlayerConverter is well provided in many respects, but the playback commands are still missing some elementary additions, including playlist support. Other than that, the package is well put together and can prove a decent helper for any user.

VideoPlayerConverter is a freeware media converter tool. It offers basic conversions between various formats without offering any fancy features. It allows you to convert DVD, VOB and other files to MP3, MP4, MKV, ASF, FLV and other formats. VideoPlayerConverter is well-optimized so it's capable of converting several files at a time. It supports most video and audio codecs in common use, including the latest MP4, H.264/AVC and AAC codecs
