If you did not activate the license before, then you must restart the machine before Autocad gets activated. The keygen finds the correct license for Autocad and will install it. The keygen will ask you to input the license key provided by the Activation Code (by default the 'Activation Code' can be found in the hard disk with the Autocad installation). The keygen saves the license data and will end the process. In the end the keygen will generate a file with the name 'autocad_key.dat' and save it in the directory where you installed Autocad. You can find this file in the 'Desktop' of Autocad and use it to activate Autocad. The keygen also creates a file called 'autocad.reg' and saves it in the 'Program Files/Autodesk/Autocad/Registry' folder. You can use this file to activate Autocad. * If you do not have a key to open Autocad, you can download it from [here](and use the keygen with the Activation Code. The keygen will find the key file for the license and install the license. Please note that you can use the file 'autocad.reg' to restore the license. It should only be used if you lost the file 'autocad_key.dat'. It must be used in conjunction with the 'autocad.log' file. The autocad.log and autocad.reg file can be found under the same folder where the keygen is installed. Q: How to get specific value from the JSON using PHP?
