Three Dots that work together to make an icon that is a visual representation of the meaning: Hold. Click. Continue. Installation: You simply need to drag the contents of the Threesome Icons zip file into your Applications folder. Please note: the installation is a one-time process and does not require further updates once your dock items are customized. The icon files included within the icon set are the same size as they would be if used as actual dock items. In this tutorial we will add a dock item which will create a shared calendar and contacts on Mac OS X. The icons that we will use for this example are called Darksky and Folder Eyes. The reason why I chose these icons is because they

have such an amazing combination of style and shape, they are really useful icons. A Calendar Icon Starting with a blank menu and adding a few shapes, lines, and text, we can then add more shapes and lines to create an icon for a calendar in this tutorial. The first step we need to take is create a new document in Photoshop and create a new shape by selecting the Rectangle tool with the following options: Area: Select the Rectangle tool Alt/Option + click the Area button in the UI View: Select View Click on the grey square that appears Draw a rectangle on the screen to create a shape for your new icon: Starting with an empty shape, we can then add any additional shapes, lines, and text that we think we need to make the icon for our calendar. It is always a good idea to have a go and see what the end result looks like; if you don't like what you are doing, there is nothing wrong with starting again. Now that we have created our basic shape, I would suggest taking a look at some tutorials that are designed to help show you how to add more lines and shapes. Learning about the different lines and shapes of Photoshop is very useful and will help you later on when you need to create more complex icons. When we are happy with the final shape of our calendar, we can then copy and paste this shape into an image file and save it as a PNG file for use as an icon. I think this will be more useful than just using a PNG file straight from Photoshop as we can then add any appropriate text and background colour to complete the look. Hello and welcome to another tutorial! This week we will be creating some nice looking
