Second, I will provide you with the installation procedure for your wallet, which is compatible with both Windows and Mac.

1. Step-by-Step Installation of the Particl Wallet for Windows. Open your system's file explorer and look for the file named "particl-wallet-installer.exe" in your Downloads folder. Double-click it to launch the setup wizard.
2. Configure the installation options. The first screen asks you to enter the name of the wallet, the wallet's password (which is optional) and the user name you wish to connect to the Particl network.
3. Run the installation and activate the wallet. Once you have entered the required information and clicked "Continue," you'll be prompted to either provide a custom RPC server address (if you plan to connect your wallet to the main Particl network) or activate the wallet (if you plan to run a private network on your own hardware). You can always check the current network status by following the prompt after clicking "Activate." Next, you'll be asked to install the wallet's dependencies. This process is quite lengthy, so be patient. Once the installation is complete, you'll be asked to re-enter your wallet's password.
4. After the wallet has been installed, you can start the wallet and connect to the Particl network. After clicking the next button, you'll be prompted to enter your wallet's public key (the long hexadecimal string you received during the account creation process). You'll also be prompted to login to the Particl network by entering your full name (which is used for all transactions) and your email address. Once you are successfully logged in, you'll be prompted to choose a username. You can always change it in the Settings section of the main window. Next
