SnoCAD-X Crack+ [Updated-2022]

snoCAD-X is a cross-platform application especially designed for snowboarding and ski aficionados. Its main purpose is to allow those who are passionate about the winter sports to design their own boards, with customized dimensions and colors. The application is intuitive enough for beginners to use it without encountering difficulties. Its interface allows you to work on multiple projects simultaneously, displaying each board in a separate window. SnoCAD-X enables you to work with the mouse in order to drag and drop parts of the board and easily modify its geometry. Alternatively, you can specify the exact dimensions using the dedicated section: the overall and the running length, the nose and tail width and length, the sidecut radius and bias, as well as the stance width and setback. The core properties can also be customized. You can adjust the sidewall width and offset, the width of the insert and outer stringers, change the tipspacer type and size. Last but not least, the appearance can be personalized by inserting locally stored images onto the board, with the possibility to rotate pictures, adjust their opacity level and modify their dimensions to fit the board dimensions. The generated design can be easily exported to DXF format and processed using a third party application or saved locally as a PDF template. Moreover, you can choose to export just the dimension table, the graphics or the design specifications. To sum up, SnoCAD-X can be of great use for those who plan on creating a personalized board. It bundles the necessary tools for dealing with all the aspects of the design, from core and shape to the outside look and style. Edition 2017 10-28-2017, 11:40 AM snoCAD-X User Agent Reviewed Version : 7.0.0.29 Available Version : Version reviewed : 7.0.0.29 What is SnoCAD-X? snoCAD-X is a cross-platform application especially designed for snowboarding and ski aficionados.
