The Lenovo Recovery Tool is a highly useful backup solution for users that encounter situations where the standard recovery applications aren't able to restore a system's factory default settings. The Lenovo Recovery Tool is built in to Lenovo laptops, so you will only have to look through the device's BIOS setup to access the program. This will make the process of backing up the system very easy, which will allow you to keep an image of the laptop's original settings. In case anything should happen to the hardware, the Lenovo Recovery Tool will allow you to restore the system to its previous state, as well as create a bootable recovery disc for troubleshooting. The Lenovo Recovery Tool includes all the functionality usually found in Lenovo's standard recovery programs, so you will only have to make a few adjustments in order to properly restore a system. In order to create a backup of the system's current configuration, you can simply follow the on-screen instructions to scan the computer, create the backup and save it as an image. You will be prompted to perform the backup only once you have selected a destination for the image. All the settings you choose during the backup process will be saved and restored the next time you use the Lenovo Recovery Tool. The factory settings backup and recovery images can then be used to restore the laptop's configuration to its original factory default settings or to create a bootable recovery disc that can be used to troubleshoot. You will be able to backup and restore the system's settings using any compatible Lenovo storage media, such as an external hard drive, USB stick, CD, DVD or even an SD card. However, if you intend on creating bootable recovery images, you will have to use a flash drive or SD card instead of a standard removable storage. You will also be able to easily create a recovery disc that can be used to fix the system's hardware, boot problems, runaway processes or filesystem errors. The CD or DVD that is created will be bootable, so you will be able to boot the system from it and access the recovery data if anything should happen to the recovery disc. The Lenovo Recovery Tool isn't limited to the Lenovo laptops sold in the US market, but also works on all the other Lenovo laptops sold worldwide.
