KEYMACRO Video Tutorial: IncrediMail is another nice email client with features that are shared with other Windows clients such as Outlook, Eudora and Thunderbird. IncrediMail Settings General When you open IncrediMail, you'll notice a fairly extensive settings menu. Not as extensive as other mail clients, but you'll be able to customize the font, colors, layout and overall appearance of the program. To find the settings you are looking for, you'll find them under the appearance menu. You can choose from several themes, including the popular IncrediMail White and IncrediMail Black, as well as other color schemes and even 3D windows and desktop themes. Advanced In addition to changing your appearance, you can use the advanced settings to make changes to your contacts, address book, and other miscellaneous settings, like your email signature. Compose New Message The compose new message window is a special window that you can use to attach images, sounds, videos, PDFs and other files to your email. This is perfect for attaching documents, and even voice and video recordings that you want to send with your email. Searching IncrediMail includes powerful search capabilities, which is very convenient if you're looking to find a specific email. To search, click on the magnifying glass to the left of the search bar. The search engine will search through all of the messages in your inbox, and even the contacts. You can also filter your search results by messages from certain people, messages with certain subjects or even by date. IncrediMail has a number of optional search options, such as searching for the subjects of your messages, and searching for 1d6a3396d6

VaySoft Image To EXE Converter

Easy to use app, but lacks features Rating: Image To EXE Converter can handle pretty much any picture format, letting you create a slideshow from almost any digital image. The list of supported formats is quite large, as is the list of actions that can be assigned. Some are basic, while others are advanced, and together they offer you the possibility to design a fully customized slideshow. Drag and drop to start the process As soon as you run the app, it's time to upload your selected images. You are able to specify the source of images, such as a local folder or a network location. After selecting an image, you can start the conversion process by either dragging and dropping the selected pictures or selecting a folder and clicking the "Add to conversion list" button. Picture management options and annotations are also at your disposal, giving you the chance to set a few parameters before the conversion process begins. The most relevant options are "Applying custom logo to output slideshow" and "Spacing", while "Swap Color" is relevant only if you want to maintain the original colors of the selected images. To configure the slideshow, you are offered a few different actions. The default ones, opening an image from your gallery, moving to a specific point in time and displaying the list of selected images, are enough to get the job done. However, the "Save" option does a lot more than just save an image, as it lets you change the name of the resulting file, choose a destination folder for the new EXE, and set your preferences regarding the slideshow name. You can also set an EXE file name, a custom logo, the slideshow background color, a few settings to make the presentation run fast, and more. After you are done with all the settings, click the "Preview" button to see what the slideshow will look like. Run and enjoy After pressing "Run", the slideshow starts automatically. The process takes a bit of time, but it's not a problem at all, especially when it comes to creating a customized slideshow. The interface may not be the prettiest thing to look at, but all of the features are placed in the right spot, leaving no chance to overlook something. To sum it up, Image To EXE Converter is a versatile tool that gives you the possibility to design a fully customized slideshow, with options to create logos,
