In this post, we're going to cover 5 ways to delete a part of a photo in Photoshop Elements. So, even if you don't know how to adjust the image, at least you will be able to easily delete something from it. 1. Selective painting The first method is called Paint brush or Selective painting. It allows you to select a section of an image and completely erase it. For this step, you must know where you want to cut, and how big is this piece. To cut it we will use the selection tool, which is activated by pressing the A button on your keyboard. Then, click on the section of the image we want to delete. The image will appear as a grayscale, so we can easily see the selected area. 2. Layer mask Another way to do this job is using the layer mask. Create a new layer and click on the layer mask icon on the toolbar, or press the F2 button. This layer will be used to mask or hide all the areas of the image that you do not want to modify. 3. Erase The third method is called Erase tool. This tool is used to delete the areas of the image that are not wanted. 4. Replace Photoshop Elements has a very powerful tool called the replace tool. It will allow you to replace an area with another one. Click the replace button on the toolbar to choose the area that you want to replace, and this area will be shown as a selection. 5. Clone stamp Photoshop Elements offers the ability to clone from another image. To create the clone, click the tool icon on the toolbar and select the clone tool. For example, if you want to remove the hair of a model or, in some cases, the background of a photo, you should use the clone tool to select the area you want to remove and then use the stamp tool. Before After In case you're wondering, I know that this method is not very convenient, but it's very useful in some cases. It can be useful for some people to remove the background, or you can use it as a starting point to add new elements to the image. Some people prefer to use the Photoshop interface for this task, but the truth is that Elements has this tool, so you don't need Photoshop to delete a section of an image. The following 05a79cecff
